

My father in law died 11 days after his second bypass surgery. The first one was a quadruple bypass, and the second was a triple. He had years of suffering, and a downhill battle. He fought hard. He was a young man when he had his first heart attack. His brother is a well respected doctor who founded a physicians hospital, and saw to it that my father in law had the best cardiologists, and surgeons in the whole country.

Still he died at the age of 55, he had much more living to do. My young children ask me what their grandpa was like because they never got the chance to meet this wonderful man. I tell them what I was told of him, being that I had never met him either.

Thanks to my father in law, my husband saw the painful suffering, and eventual death, and knew that was not the path he wanted to take. When my husband had his heart attack, he was diagnosed with congestive heart failure, and his doctors wanted to do surgery. We were terrified. We searched for an alternative, we found oral chelation, our lives have changed in such a positive way.

No surgery, chest pains, heart attacks, breathing problems, swelling in the legs, exhaustion, high blood pressure, surgical scars, and the best part.....my six children have their daddy. So now I dedicate myself to helping teach others about all their options, and make available the finest most effective products we could find after searching the world over.

Happily ever after - Mary
