

"You have a blockage in your arteries", was all I heard before my head started spinning with worry.

I had been having pains in my chest, arm & heart for so long that I had gotten used to it and thought it was just part of growing old. Every time I mentioned the pain to my doctor he would brush it off with, "It's just stress, try and take it a little slower". Easy for him to say, but I had a thriving business, kids, a demanding husband, a house and numerous projects on the go at all times.

Deep inside I knew it was not just stress because the pain would start even at night when I was sound asleep. The sharp pains would wake me from my sleep. How much stress could I have if I was sleeping?

When I was advised of the blockage, I was scared but also relieved that finally they found the problem.

An angiogram was scheduled and much to my surprise, it came back that everything was fine and no blockage could be found. "How was this possible, I still had the pain. The testing that found the blockage consisted of a dye being injected into my veins for the xray camera to detect any blockage.

The results were scrutinized by the xray technician and confirmed that the blockage was there.

Still confused and a little relieved, I just accepted the findings and got on with my life pain and all.

In addition to my chest pains, I could not lift my right arm very much due to the pain in my right shoulder, my doctors told me it was a build up of calcium and that there was nothing I could do about it. To make matters worse, I started experiencing a numbing on my right leg between my knee and my hip bone. The numbing would come and go several times per hour and lasted about 5 minutes each time. At first my doctor said it was a pinched nerve from my hip, but since this went on for years he then told me it was caused by my diabetes and there was nothing that could be done about it, and it was getting worse.

A few weeks after my angiogram, I met Dr. Randolph Pinch through a mutual friend. One thing led to another and somehow I started talking about my pains and my angiogram results. Much to my surprise Dr Pinch told me that the reason no blockage was found during the angiogram is because any soft plaque (which is what he suspected I had) is compressed due to the pressure in the arteries during the procedure so it does not show up on the monitor as a blockage.

Oh my God, this made so much sense. He also told me his story of when he collapsed due to a sever blockage in his arteries. Being a Master Herbalist, he decided to take matters into his own hands and started working on a chelation that would desolve the plague.

Long story short, I took Dr Pinch's chelation two years ago and I have never looked back. My chest, arm and heart pain which I had had for over 10 years is gone, but much to my surprise the calcium build up on my right shoulder was also dissolved and now I can move my arm without any restriction or pain. The icing on the cake, is that the numbing feeling in my right leg has gone away as well.

THANK YOU, THANK YOU, THANK YOU, DR. PINCH YOU HAVE SAVED MY LIFE!
